
Fraction of each direction inside the action-readable subspace of pi05_libero (top k eigenvectors of M from F6, holding 90% of its total). H3 predicts that the progress direction has low rho, which would explain why progress is decodable but does not steer. rho is about a first-order response; it is not a steering result (F8). Pilot: pi05_base vs pi05_libero, which was fine-tuned on the full LIBERO data. This is a large fine-tune; the few-demo regime is left for later.
