
Relative weight change of pi05_libero from pi05_base, per layer (Frobenius norms pooled over the layer's weight matrices; gray: the module has no such layer). This shows where weights moved, not which changes matter: it is the static view of Häon et al. and RETAIN that the causal pilots (F3, F4) go beyond. Pilot: pi05_base vs pi05_libero, which was fine-tuned on the full LIBERO data. This is a large fine-tune; the few-demo regime is left for later.
