

Spectrum of the action expert's sensitivity to a vector added to every prefix token's residual, pi05_libero, 240 LIBERO training states x flow times 1.0, 0.5, 0.1 x Gaussian probes = 11520 vector-Jacobian products per layer. Right: k recomputed on subsets; k is only meaningful where the curves flatten, since the estimate cannot see more directions than it has columns. Sensitivity is local (a first-order response at zero shift). Pilot: pi05_base vs pi05_libero, which was fine-tuned on the full LIBERO data. This is a large fine-tune; the few-demo regime is left for later.
