
Layer-level activation patching, sufficiency direction: base run with one fine-tuned activation swapped in, on 240 LIBERO training states; bands are 95% bootstrap intervals over states. A residual patch changes the KV cache of all later layers (computed by base weights); a KV patch changes one layer only. Pilot: pi05_base vs pi05_libero, which was fine-tuned on the full LIBERO data. This is a large fine-tune; the few-demo regime is left for later.
